## New Stream Market Price Assessments

### Carbon Markets :

- Power along the curve was also lifted by carbon with EUAs setting new highs above €58/t.
- The price remains in uptrend with forecasts indicating further increases to the end of the year.

### Gas and Power :

- Markets are still well supported amid Russian supply concerns.
- Gas prices increased significantly yesterday on the spot market with Winter 21 trading above 122p/therm.
- Above seasonal average wind generation has driven the power market in recent weeks.
- With lower wind generation towards the end of this week, we expect to see increased power prices to maintain the spark spread.
